

# ENABLING NO CAPEX REVENUE STREAMS FOR BSPs

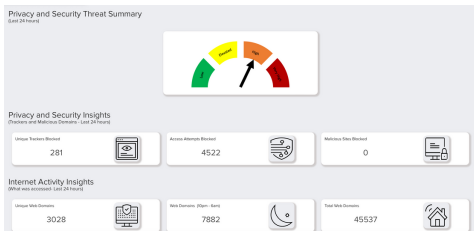

The Online Privacy & Security Company

## Kavalan Intelligent Digital Safety - a cleaner, safer internet for cable modem, FTTH and WISP subscribers

### KAVALAN FEATURES

- Opt-in based subscriber enrollment
- No software to install for subscribers
- No devices or hardware to buy
- Protects laptops, smartphones, smart TVs, smart speakers and more
- Blocks malware, phishing, botnets
- Blocks adult content
- Blocks social media, streaming apps
- Blocks privacy violating ads, trackers, beacons, pixels and data brokers
- Block any internet domain
- Daily personalized insights

### THE PROBLEM

Subscribers are increasingly adopting smart home devices and apps. They need cyber threat protection, online privacy and the ability to block adult content and apps in their home across all devices. Current solutions that ISPs can provide require different hardware and software for FTTH, cable modem and WISP customers. There is no way to deliver a unified experience to subscribers without significant CAPEX or management overhead. CPE upgrades or updates result in changes to the subscriber experience.

### OUR SOLUTION

Kavalan is a simple, affordable, whole home online security and privacy product that delivers enterprise grade cybersecurity in an Opt-In model. For subscribers, there is no software to install, no devices to buy. ISPs can deploy Kavalan to their entire subscriber base in minutes. Kavalan is CPE independent, requires ZERO CAPEX and can be used by cable modem, FTTH and WISP subscribers. Subscribers can be enrolled and provisioned from the office with no van drive needed.
